

# REMOVING THREADS AND REWEAVING TUTORIAL

1. When removing threads, always start in the middle of the area where you would like to cut. Cut in the middle and remove the threads one at a time back to where you would like to end. Do NOT cut the thread off.

2. For this purpose I have removed 4 threads. Most fabric is woven over and under vertical threads which means your edges when you remove threads will not be even. Look at the picture below (photo 2).

4. To make the edge nice and even, the top thread in the photo is woven back under the next vertical thread. (photo 3)
5. The second thread from the top comes out one thread behind the first one, so we will bring that thread forward over the vertical and then weave it in behind. (photo 4)
